

# neovim for newbies

by jacksmithxyz

neovim is a highly extensible text editor.

you can write words, code, or whatever else from your terminal.

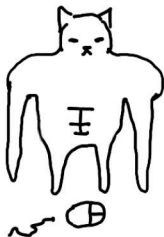

it starts simple, and lets users add the functionality they want.

want your favourite colorscheme?  
git support? add the relevant plugins.

○

neovim plugins are written in lua.  
a friendly scripting language  
used by roblox, WOW, and more.

if you don't want to touch your mouse again, neovim might be for you.

edit text, delete sentences, save and quit files, and much more with vim-based keybinds.

Thanks for reading!
